MBF3C: UNIT 1 - Trigonometry

## 1.5: The Cosine Law

## Recall: The Sine Law

$$
\frac{\sin (A)}{a}=\frac{\sin (B)}{b}=\frac{\sin (C)}{c}
$$

Example 1: Find the measure of side $\mathbf{c}$ in the triangle below.

Example 2: Find the measure of angle $A$ in the triangle below.

New Today : The Cosine Law

$$
\begin{aligned}
& a^{2}=b^{2}+c^{2}-2 b c \cos A \\
& b^{2}=c^{2}+a^{2}-2 c a \cos B \\
& c^{2}=a^{2}+b^{2}-2 a b \cos C
\end{aligned}
$$

Example 1: Can you use SOH CAH TOA to solve for c? Why not? Can you use Sine Law to solve for $c$ ? Why not?

Now you try: Solve for c.

Example 2: In $\triangle A B C$, given $\mathbf{a}=7 \mathrm{~cm}, \mathbf{b}=8 \mathrm{~cm}$ and $\mathbf{c}=10 \mathrm{~cm}$. Find the measure of $\angle \mathrm{A}$ to the nearest degree.

Now you try: In $\triangle A B C$, given $\mathbf{a}=18 \mathrm{~m}, \mathbf{b}=22 \mathrm{~m}$ and $\mathbf{c}=30 \mathrm{~m}$. Find the measure of $\angle \mathrm{C}$ to the nearest degree.
